# FAN CONTROLLER

200 Degree F Activation · 3/8 in NPT Temperature Sensor · 40 amps Relay

PART NUMBER
**QRP60-039**

## OVERVIEW

A fan wired to run constantly is a parasitic load and a fan wired through the switch panel is one more thing for the driver to remember. A relay and temperature switch let the fan look after itself. The kit includes a 40 amp relay, a water temperature switch, and the wiring harness to connect them.
