WARNING LIGHT

Water Temperature · 235 Degree · 1/2 in NPT Male · Light / Sender / Wiring · Blue

PART NUMBER
QRP61-712

OVERVIEW

QuickCar Warning Lights provide an immediate visual alert when a monitored vehicle condition requires the driver's attention, helping racers recognize developing problems without continuously watching individual gauges. When paired with the appropriate pressure, temperature, or other warning switch, the bright indicator gives the driver a simple, highly visible signal that a critical operating condition has reached a predetermined threshold. This allows the driver to keep attention focused on the track while still maintaining awareness of important vehicle systems.

Compact construction makes the lights easy to integrate into gauge panels, dashboards, and custom instrumentation layouts, providing a straightforward solution for adding dedicated visual alerts to a racing or performance vehicle. Ideal for new instrumentation systems, custom dash builds, or replacement applications, QuickCar Warning Lights help turn important vehicle information into a signal the driver can recognize at a glance.

SPECIFICATIONS

Application	**Water Temperature**
Color	**Blue**
Temp Range	**235 Degree**
Sold As	**Kit**

SHIPPING & PACKAGING

Package	**8.95 × 5.5 × 2.05 in**
Ship Weight	**0.57 lb**
Country of Origin	**USA**
Vehicle Type	**Car**
